[FOR IMMEDIATE RELEASE]

Washington State Department of Enterprise Services Selects FacilityForce to Modernize Facility and Asset Management Across State Portfolio.

Austin, TX – 12/5/25: FacilityForce, a leading provider of integrated facility and asset management software for the public sector, is pleased to announce that the **Washington State Department of Enterprise Services (DES)** has selected FacilityForce as a technology partner to support facility operations, asset lifecycle management, work order administration and capital project oversight across its statewide property portfolio.

DES is responsible for more than **5.5 million** square feet of office, public, and historically significant properties distributed across multiple counties, including the **Capitol Campus** in Olympia. To support its mission of delivering safe, efficient, and well-managed public facilities, DES sought a **comprehensive, unified software platform** designed to streamline workflows, improve data visibility, and strengthen long-term stewardship of state resources.

FacilityForce is excited to deliver the following services to this project:

- **Comprehensive Asset Management** – A solution capable of managing a wide range of building types and facility conditions across the state's diverse portfolio.
- **Work Order and Operations Management** – Tools to support the full lifecycle work order tracking, scheduling, and performance reporting.
- **Capital Project Management** – A project governance and reporting framework that enhances visibility into project scope, schedule, and budget performance.

DES plays a **critical role** in stewarding facilities that serve the public, elected officials, and state employees. We're honored to support its mission by providing an integrated, purpose-built platform that strengthens operational efficiency, enhances accountability, and supports long-term planning.

The implementation of FacilityForce will provide DES with a **single, scalable system** of record that improves decision-making, enhances service responsiveness, and supports sustained capital investment strategies over time.

FacilityForce and DES will move forward with a phased implementation approach that prioritizes continuity of operations and change management while accelerating long-term value.

About FacilityForce

FacilityForce, Inc. specializes in facilities and asset management software to address the real estate and asset management challenges that government organizations face today. FacilityForce is committed to helping organizations better steward their property portfolios with software for facilities strategic planning, maximizing asset life, driving operational efficiency, improving customer service, reducing maintenance costs, creating data transparency for better decision making, and much more. Although FacilityForce is a new name in the software industry (launched in 2021), it was carved out of AssetWorks Facilities, a software developer with a rich history dating back to 1991 (30+ years ago).

In partnering with its customers, FacilityForce is pleased to have pioneered a new category of software it calls Facilities Resource Planning (FRP), which is a combination of its long-standing Integrated Workplace Management System (IWMS software) tightly coupled with an organization's Enterprise Resource Planning (ERP) software to create a powerful property and asset intelligence system for better real estate alignment and decision making.

About DES

The Department of Enterprise Services supplies centralized business services to Washington state government agencies; other public entities such as cities and counties; to tribal governments; and to Washington residents. Key services include: Capitol Campus daily and long-term management, including maintenance, construction, parking, visitor services, and security; public works and building energy efficiency project management; contracts and procurement; employee assistance including access to financial and mental health counseling; facility, property management, and leasing services; fleet and electric vehicle management; printing and mailing services; risk management; small agency support; surplus property; and training and workforce development.
